to the concept of Black Swans, intro-
duced by the famous book of Nicholas
Nasrullah, a financial event that you
do not expect to happen, in particular a
event that you did not think was going to
happen; it was that you did not take it into
consideration until it had happened. And
there lies the importance of risk
management. Black Swans and other such
concepts help the user to not to con-
secutively identify a Black Swan event
but at least to have a robust system in
place to counter the possible outcomes
from the repercussions of the event. Just
as in our example, Craig finally put it as
"a successful model with you things you
could have done it if I told you yes.
In this article I intend to bring these
concepts into limelight.
Exposure to the students of
higher academic institutions in
Bangladesh and the like in The
determines the value of a particular
financial product or an event.
Although, quantitative
methods and number crunching
are necessary. However, even
though these tools are complex
in nature and it is beyond any of us
to accurately predict, there are
tools that can be used in order to
make predictions or at least to
help the user to incorporate uncer-
tainty in their risk management
decisions and calculations. One
such tool is the uncertainty
framework which is a very simple way of modeling
risk. Consider this analogy - you
want to change a light bulb which is
hanging in the ceiling and you need to
stand on a ladders to reach that height.
Now how would you know that the
ladder is not going to fall on you or
your wife. If you make the ladder
with different random strengths,
and see whether the ladder can
withstand the strength. The stronger
the ladder. The same applies to
Black Swans. 
Software giant Microsoft
for the first time in Bangladesh
campaigning up a sizeable placement
opportunity for the technical students.
The objectives of this initiative is to give
job placement opportunities to exemplary
talent coming from the universities.
